2022 – 2024

Master Thesis / Workshop-space at BLADE Festival

SÁBÁT Pavilion - Front View

Texcycle Yarn, recycled Fabric, Wood, Metal, PLA 11 / D 370 x H 230 cm

Metamorphosis

In recognition of the elements of hospitality, care, and community, SÁBÁT emerges as a curatorial endeavor that reimagines cultural spaces through an architectural installation, designed to serve as a living framework where the spatial environment itself becomes a facilitator of dialogue, & collective rituals.

Rooted in the ancient wisdom of Zoroastrian Philosophy, SÁBÁT aspires to transcend mere architectural installation, seeking to evoke a dialogue between past and present, and to cultivate a space where stories are interwoven into the very fabric of its being.

SÁBÁT deploys Iranian mosaics in a post-industrial context, creating a modular system to reshape the space it inhabits.

SÁBÁT Pavilion - Inside

SÁBÁT Pavilion - Side back View

Method

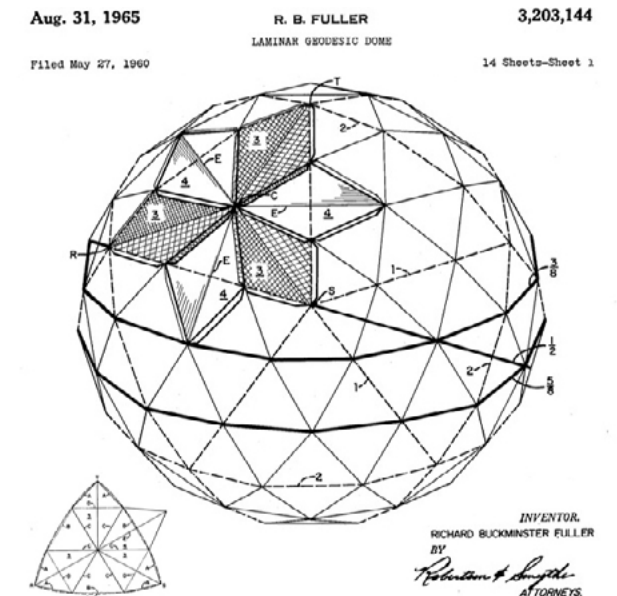

The Pavilion's structure draws significant inspiration from the mosaic patterns in Iran's historical architecture. I analyzed existing Iranian mosaics for their acoustic and atmospheric effects, aiming to reinterpret their forms and employ them in a three-dimensional, modular structure.

Ceiling of the Music Hall, Ali Qapu, Isfahan - 1597 CE

Process

Drawing inspiration from Buckminster Fuller's geodesic domes and the mosaic works of Iranian architecture, I explored their intersection to develop a modular system. This system took shape through a series of functional models and tests, to balance stability with acoustic harmony.

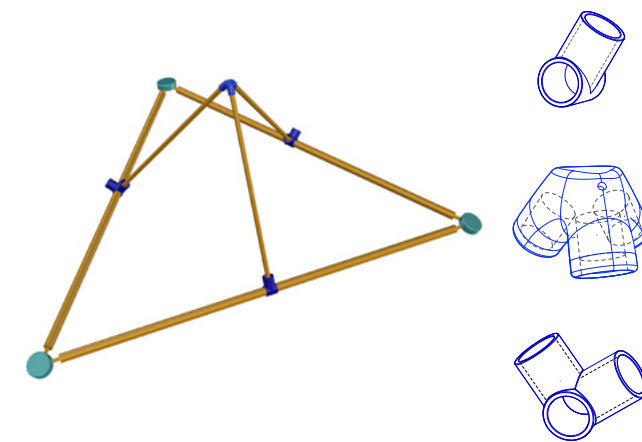

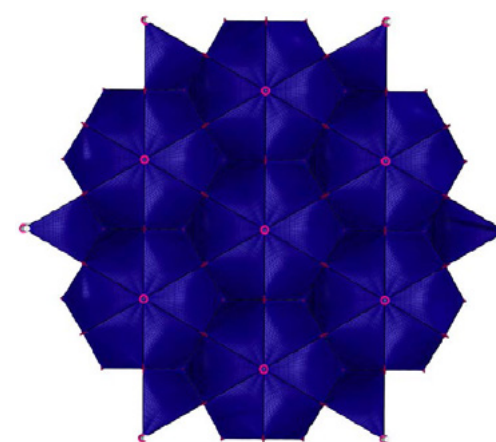

By utilizing yarn developed from “used clothes” in the Texcycle research project — a collaboration between HSLU & Texaid — textiles were knitted and crafted to envelop the pavilion.

The resulting garments are a collection of Memories, echoing the journey & story of the worn clothes & their previous owners.

The iterative sketches, models, and CAD prototypes — guided by statistical testing and analysis — elevated the potentials of the pavilion's modular architecture.

Each module, with three main 3D-printed and machined connectors, offers both flexibility and structural integrity, allowing for various space-forming configurations.

The Module & its connections

Video installation - Justyna Jakobowska

Blade Festival is an uncommercial, queer-feminist music event known for its celebration of multiplicity, pluriversity, and collaborative spirit. This project started two years ago to cultivate spaces that elevate marginalized voices through a dynamic convergence of 70+ artists, DJs, and cultural visionaries, attracting more than 700 participants where art, music, and cultural discourse intertwine.

BLADE focuses specially on hosting empowering workshops that tackle important socio-political themes such as transformative justice, queer relations, safer sex practices, consent-building, mental health resilience, menstrual destigmatization, responsible consumption, nature exploration and climate awareness.

My Roles at BLADE

- Program Curation & Bookings:** Conceive and organize music, art, and cultural programs for the BLADE Festival, founded by "Initiative Musik".
- Stage & Spatial Design:** Design, create, and implement stage sets and spatial concepts for the events.
- Graphic & Communication Design:** Develop visual identities, corporate design elements, and multimedia content (video/3D) for impactful digital campaigns.
- Awareness Concept:** Initiate strategies to foster safer spaces, promote intercultural dialogues, and raise social awareness.

My body is a temple - Eros & Elie

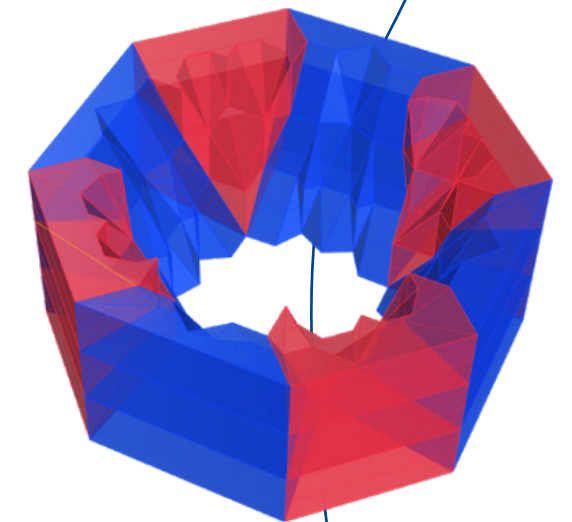

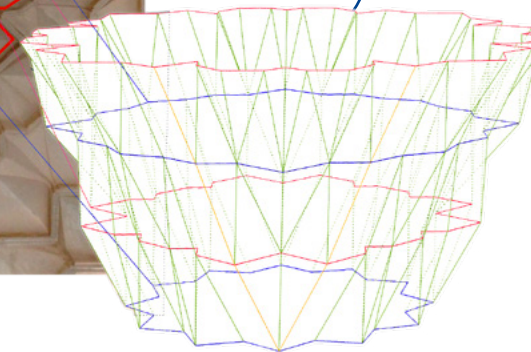

« (...) the mythical and symbolic journey from a square to a circle in sacred buildings creates geometrical transitional patterns, which was fundamental to the root of my final master project.»

Tomb of the Sufi Mystic Abd al-Samad Isfahani (1308 A.C), Isfahan, Iran

Analysis of the tomb – Building the Form in Carton & Casting
Preparing the Negative in Plaster – Casting in Porcelan

Method

This project studies structures of the monumental buildings in ancient Iran, revealing the origins of geometrical discoveries and developments in religious architectural design expressions.

For this purpose the internal structure of the Tomb of a Sufi Mystic (1308 A.C.) in Isfahan was analyzed to feature engineering and structural innovations in ancient geometric design. The structural form rising from an octagonal base within cruciform system evokes a sense of spirituality, profiting from the interplay of lights & shadows created by the geometrical textures of the Tomb roof.

Process

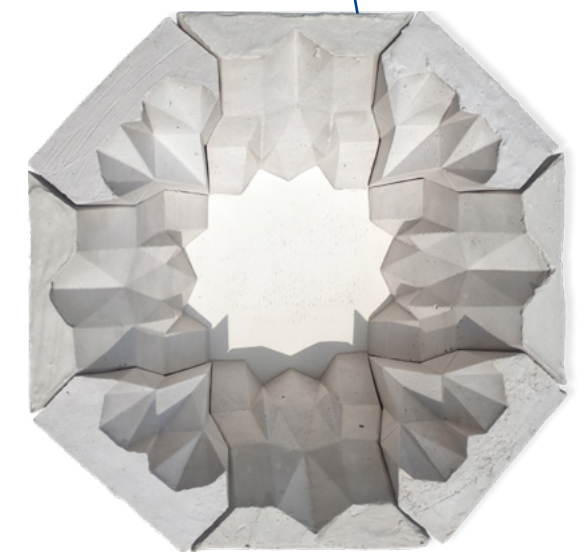

The transition from square to circle that takes place in the Tomb roof - which the object (Bowl) resembles - highlights the sensual aspects of the liminal space, the transition, and the symbolic of inbetween.

The precision of these structures required adequate and practical modelling techniques. To achieve this I used digital drawings to analyze the form of the Tomb roof. On the basis of these observations I developed a cast from carton, which was built using a cutting plotter machine. Afterwards, I used various modelling techniques to develop a production cycle that protects the precision of the work.

Endproduct (Bowl) casted in Porcelan

2D Design based on 3D Analysis of the Portrait

« (...) an attempt to conceptualize an abstract reaction to manipulate facial-recognition.»

Method

Facial recognition is a delicate topic, deeply connected to our contemporary epoch. This project aims to conceptualize an abstract reaction to manipulate this phenomenon.

During two years of face anatomy studies in various sculptural projects, I conceptualized the possibilities of a harmonic design in sunglasses. The main objective was to achieve an expressive shape that dissolves and emphasizes specific facial characteristics using the form of the human skull. Each frame was then designed for a certain person, studying features of their face.

Process

The first phase of design analyses the structure of a specific face by drawing and sculpting in order to portrait the subject. The second phase realizes a tangible form through various two-dimensional frames following the preliminary designs. The final step is to create a form within the developed frame, connecting it to the shapes of the face.

Different traditional handcraft methods such as fast modelling, steam bending and sculpting were used, as well as digital fabrication techniques using CAD and 3D Printing to realize the end products.

Technical drawing, Side-cut

« (...) inspired from both agricultural, ancient & modernized silos.»

A collaboration between:

This project is one of the many proposed and executed designs for the light factory Mawa in Berlin. The basic model of the design is inspired from both agricultural ancient and modernized silos. On one hand, using the traditional glass production methods for component A (detailed above) brings out the ancient like feelings of the form and material. On the other hand, components B & C are produced using digital fabrication techniques to mould the ceramic and implementing technical parts of the light.

Process

The exchanges with different production offices were a great experience. Working with professional technicians and discussing solutions for the production brought up a lot of new ways to approach design. These conversations recognized the reality of design and the importance of the technical aspects of production. The design process took six months and then was manufactured by Mawa under supervision of HAW Design Atelier.

acknowledgments

As we conclude this application, I extend my deepest gratitude to you for considering me for this opportunity.

This portfolio is not merely a reflection of my work, but a testament to the collective wisdom, support, and inspiration that have continuously shaped and inspired my journey. I am compelled to acknowledge the intricate web of friendships and camaraderie that have empowered me to elevate my vision and perception in each project through their Indispensable guidance and care.

Cultural activism, for me, has never been a solitary venture, but a shared endeavor—a collective quest for justice, a stirring tribute to memory, and a labor of love. Every individual, every moment, and every experience etched into this journey has left an indelible mark, for which I am eternally grateful:

Mentors:
